OBJECTIVE

I am an innovative computer engineering student and technology enthusiast with a passion for developing code and optimized digital solutions. Experienced in web development with knowledge of front-end and back-end technologies, eager to contribute to a dynamic team where analytical skills and technical expertise can drive significant progress and success.

SKILLS AND ABILITIES

skills:

Knowledge of programming languages: front-end, HTML, CSS, JS, Bootstrap, CSS backend:

Experience with Node.js for backend development

Familiar with Bootstrap for responsive frontend design

Knowledge of SQL and MySQL for database management. soft

Skills:

Analytical and problem-solving skills applied to software development projects. I like complex problems; I like to explore the most challenging solutions to everyday problems.

Interpersonal skills: Innovative thinking.

Willingness to propose innovative ideas and technological solutions that optimize the development process and improve the user experience.

Critical Thinking and Problem-Solving Ability to analyze complex problems and find creative and efficient solutions, essential in software development and bug solving. Emotional Intelligence

Ability to manage emotions and self-reactions, maintain motivation in times of high pressure and understand others, promoting a positive work environment. Strong team collaboration and communication skills

EXPERIENCE

Independent Consultant - Saint Enterprise System

09.2019- Present

Provides technical consulting in the use and configuration of the Saint Enterprise system for small businesses, optimizing their accounting and inventory processes.

Provides personalized support in the implementation of the software, advising clients in the automation of accounting tasks and in the generation of financial reports.

Trains users on key system functionalities, improving operational efficiency and accounting data accuracy by 20%.

Freelance Software Developer - Family Accounting Office

01.2020 -Present

I designed and developed customized accounting applications, focused on billing management, payment tracking and reporting.

Implemented automated solutions for tax calculation, balance sheet generation and inventory management, reducing manual processing time by 50%.

I created the accounting firm's website, optimizing the online presence and facilitating access to services for clients.

COMMUNICATION

Effective communicator in technical and non-technical environments, especially in advising clients and end users of the Saint Enterprise system.

Ability to simplify technical concepts and facilitate understanding in training and software presentations, making non-technical users feel confident in handling accounting applications.

Clear presentations and documentation for the developed applications, improving the understanding and autonomy of the users in their home office and with their clients.

LEADERSHIP

Leadership in accounting application development projects, from needs analysis to implementation, coordinating with her family team to optimize workflow.

Mentoring and training users on the Saint Enterprise system, demonstrating patience and teaching skills, facilitating the adoption of recent technologies in her clients' companies.

Self-management in independent consulting, managing projects efficiently and demonstrating leadership in technical decision making and support strategies.
